"Black Leaf" Worm Pellets

"Black Leaf" Worm Pellets offer a safe, effective control for poultry roundworm. They contain nicotine in odorless, tasteless, and shockless form — no toxic shock to the fowls to throw them off feed or off production, because the nicotine is not released until it reaches the intestines, the seat of roundworm infestation. A half-pellet is recommended for fowls weighing less than 2 lbs., and for heavier fowls, a whole pellet is the proper dose.

25 pellets, 35c; 50 for 65c; 100 for 85c; 1000 for \$5.95.

Archias' Missouri 8

Main Crop Yellow—120-125 days

Developed by Mo. Agricultural College. In use for 8 years. In 6-year trials in Missouri, outyielded Reid's Yellow Dent 36 per cent. A smooth, yellow corn, not flinty, prolific, tending to two or more good ears on fair soil and in good season. Big-rooted, strong-stalked, making it drought- and wind-resistant. Is also disease-resistant. Dark green foliage.

Archias' Missouri 47

Main Crop Yellow—110-115 days

Also developed by Mo. Agricultural College. Strong and vigorous, medium height, much the same as Mo. No. 8 except about ten days earlier. Ranked first in 48 tests in Eastern Kansas in 1939-40 trials and is a leader in many other trials. In official tests in Missouri over a 3-year period, outyielded Reid's Yellow 48 per cent.

Illinois 200

120-125 days

Very similar in parentage to Missouri 8. A fine substitute for Missouri 8, as there is not enough of this popular hybrid to go around this year. Illinois 200 matures in 120 to 125 days. 1 to 2 ears on stalks of medium height, large cylinder ear, excellent corn to stand up, disease resistant and drought resistant.

US 13

Main Crop Yellow—120-125 days

A grand hybrid in every way and very popular throughout the corn belt. Single ear tendency. Deep kernels high in feeding value. Resistant to drought and chinch bug. Shucks easily. Stands up well. The first hybrid to ever win the Grand Championship at the International in Chicago, in both 10-ear yellow and shelled corn class.

US 13 Extra Heavy Producer

Never have we seen a variety of corn that had such unanimous farmer approval as U. S. 13. They like its large well-formed ears, its fine feeding qualities, its strong stalks and its enormous yields. Looks and feeds like open pollinated corn but what a difference in production. Its nice big ear on every stalk. Its erect growth. Its resistance to chinch bug damage. Its rapid vigorous growth and its fine dark green color. All these are found in U. S. 13. It comes as near to being one ideal corn as any Hybrid.

KEYSTONE 38 125 days

A fine hybrid for Missouri soils. Has consistent high yields for the past 4 years. Soft, high feeding value, resistant to disease and drought. One ear. Medium height. Stands up well.

Archias' MISSOURI

MISSOURI STATE CERTIFIED

Reid's Yellow Dent SEED CORN

This is Missouri's best known variety, but all Reid's Dent is by no means equal in production. Many strains have been allowed to deteriorate. Archias' Missouri State Certified is grown by Missouri's best known seed corn grower—he has won first prizes consistently wherever this corn is shown. Painstaking selection and constant supervision has made this strain "tops" for Reid's Yellow Dent. The average maturity is 110 days. Ears 9 to 13 inches long—well filled out from tip to butt with deep, close set grains—Order Early! The supply of this fine seed is limited. Price by mail, postpaid: 1 lb., 25¢; 5 lbs., 60¢. By freight or express: ½ bu., \$2.15; 1 bu., \$4.00; 2 bus., \$7.80; 10 bus., \$37.50.

ARCHIAS' 90-Day Yellow

A quick growing yellow variety, highly desirable and popular with feeders who want an early feeding Corn. Matures in about 90 days. Archias' 90-Day Yellow ears are about 10 inches long, sometimes two to the stalk; deep, moderately rough kernels high in protein and oil content make it an excellent feeding Corn. Price by mail, postpaid: 1 lb., 25¢; 5 lbs., 60¢. By freight or express: ½ bu., \$1.55; 1 bu., \$2.95; 5 bus., \$14.50.

By mail, postpaid: 1 lb., 25¢; 5 lbs., 60¢. By freight or express: ½ bu., \$1.65; 1 bu., \$3.25; 2 bus., \$6.50; 5 bus., \$30.00.

HYBRID SEED CORN

FUNK'S "G" HYBRIDS *Home Grown*

FUNK'S HYBRID G-94

Medium to full season in maturity, this single-eared yellow hybrid has enjoyed an outstanding record through Northern and Central Missouri, and Kansas. Has the highest 2-year record in Kansas test—69.29 bushels in the Northwestern section. Is in the top two in Northern Missouri 2-year averages and in 1940 placed in the top group in both Central and Northern Missouri.

Leafy, dark green; grows to medium height, and stands up exceptionally well, surviving chinch bug and root worm attacks. Resistant to grasshoppers, heat, drought and Stewart's Disease. Its cold resistance allows it to be planted early, giving time to mature the large single ears of exceptional grain quality.

FUNK'S G-80

Full season in maturity (about one week later than G-94), a single eared yellow variety.

G-80 is a new, rapid growing, high yielding hybrid that has unusual stalk qualities enabling it to stand up even when storms level other corns. This hybrid has demonstrated its ability to withstand wind, drought, chinch bugs, Stewart's Disease and Ear Worms. It will deliver a rich golden harvest of excellent feeding quality, good deep kernel corn on soils of varying fertility levels. A winner in state yield tests and private trials, it is the answer to many of the corn growers' problems in Central and South Missouri and Kansas.

FUNK'S HYBRID G-235

An early maturing, yellow strain, G-235 is a consistent performer on fields of average fertility,

having about 50 per cent two-eared plants under normal conditions and more under favorable seasons and high fertility.

Produces medium-tall plants with beautiful dark green foliage. Ears are medium low on sturdy, well-rooted stalks. Its excellent grain and splendid feeding qualities are highly preferred by many farmers throughout this territory as an early maturing corn.

FUNK'S HYBRID G-53

Early in maturity, single eared yellow variety. Is suited for late planting over Kansas and Missouri. Best suited to good fertility, it also gives a good account of itself on average fields.

A favorite with feeders, G-53 has a dimple dent and is the softest corn we produce with high marketable and feeding value. Medium-height corn bears a single ear, medium low on the stalk. Stands up and holds the ear on the stalk and picks easily. Chinch bug, root-worm, cold, heat and drought resistant.

FUNK'S HYBRID G-169

Early maturity, single eared. Is recommended for northern Missouri and Kansas.

G-169 is a new, single eared yellow Hybrid with the ears carried at medium height, convenient for hand or mechanical picking. Superior stalk quality and excellent root system enable this Hybrid to stand up when less sturdy selections go down. G-169 produces a fine looking corn of excellent feeding quality.

Our mixtures contain only the highest quality seed of the finest turf growing grasses, blended in ideal proportions, based on our 57 years' experience.
